

FIN FAN COOLER

Manufacturer Guide & Product Overview

United Cooling Systems Pvt. Ltd. — Coimbatore, India

A Fin Fan Cooler is an industrial air-cooled heat exchanger that uses electric fans and finned tubes to cool process fluids or gases using ambient air, eliminating the need for water-based cooling. United Cooling Systems has manufactured API 661 and ASME-certified units for oil & gas, power generation, and petrochemical industries for over 25 years.

Fin Fan Cooler vs. Water-Cooled Systems

- Zero water consumption — ideal for water-scarce regions
- Lower long-term operating cost — no treatment, pumping, or blowdown
- Reduced fouling and corrosion — avoids scaling common in water-cooled tubes
- Simpler site infrastructure — no cooling towers or water storage needed
- Full environmental compliance — no thermal water discharge to manage

Certifications & Capabilities

API 661 & ASME Certified	Built to international standards for critical industries
ISO 9001:2015 Assured	Strict quality control from raw material to dispatch
25+ Years Experience	500+ industrial clients across India
100% Custom-Designed	Engineered to exact process specifications

Fin Fan Cooler Configurations

Configuration	Description
Forced Draft	Fans push air upward through the tube bundle from below
Induced Draft	Fans draw air upward through the tube bundle from above
Hybrid Variable Pitch	Combines air and evaporative cooling for higher efficiency

2026 Technology Trends

- AI-Powered Smart Monitoring — cuts unplanned downtime by up to 40%
- Next-Gen Hybrid Cooling — 25-30% higher thermal efficiency
- Compact Modular ACHE Designs — faster install, lower civil costs
- FRP & Titanium Builds — 2x service life for coastal/offshore use
- Variable Speed Drive (VSD) — cuts energy use by up to 35%

Other Products We Manufacture

- HairPin Type Heat Exchanger — high pressure (up to 350 bar), compact design
- Brass Tube Bundle Heat Exchanger — corrosion-resistant, marine & offshore use
- Dump Condenser — rapid condensing for steam turbine plants
- Air Fin Cooler — 100% ambient air cooling, zero water use
- Skid Mounted Cooling Towers — factory-assembled, plug-and-play
